PROJECTS

Farmers App	2026
• Developed a project focused on helping farmers make better decisions when selling their crops. • Designed the idea around comparing available mandi prices so farmers can evaluate different markets before selling their produce. • Helped farmers identify a suitable mandi offering a better available price and reduce the chances of missing fair market value.	
Memory Vault	2025
• Developed a privacy-focused web application for storing and managing personal memories. • Designed a clean and user-friendly interface using HTML and CSS for organized memory management. • Implemented interactive functionality with JavaScript to improve user interaction and usability.	
Adaptive Haptic Alert System	2025
• Developed a smart vibration-based alert prototype using sensors and microcontrollers. • Designed and assembled the physical circuit with battery integration for a functional prototype. • Presented the working prototype, demonstrating its practical application as a haptic alert system.
